

# Roadmap

Martin Gwerder

Dezemer 2013

## 1 Abstract

The following document offers an outline of the Roadmap. All positions of the Roadmap have been described. For the Glossar of this document please refer to the thesis document.

## 2 Structure of the Thesis

The thesis shall be structured in four main Parts:

- Information Gathering  
In this phase there should be intense research on existing technologies, standards, ground Theory and researches relating to the topic. The findings should be collected and consolidated.
- Analysis  
The information found needs to be consolidated analyzed for their usefulness and outlining gaps in the current technology.
- Design  
The analyzed information needs to be consolidated and recombined into a target solution. The proposed solution should be ready to be defined in an RFC-Document.
- Writing of the RFC-Document  
Based on the proposed design an RFC-Document should be written. This document must reflect a minimum and a recommended baseline for an anonymous mail infrastructure.
- Implementation  
Based on the RFC-Document there should be a client implementation and a server implementation for an minimum baseline client.
